Important distinction: **condition** vs **situation**

situation

= broad set of circumstances at a particular time

condition

can mean:

- * state
- * environment
- * requirement
- * illness

> difficult situation

> difficult conditions

Both are possible, but **conditions** often emphasizes the external environment.

Important distinction: **condition** vs **state**

state

is the broad neutral word for how something currently is.

condition

often evaluates quality, fitness, health, or usability.

> “The machine is in a bad state.”

broad.

> “The machine is in poor condition.”

more specifically about its physical/working quality.

Important distinction: **condition vs requirement**

requirement

directly means something that must be done or possessed.

condition

means a requirement tied to an agreement, permission, result, or event.

> “One condition of entry is identification.”

= 入場條件之一是提供身分證明。

Important distinction: **condition vs disease**

disease

specifically refers to an illness or pathological process.

condition

is broader and sometimes less direct.

> heart disease

> heart condition

A **condition** may be chronic, temporary, or not neatly described as a single disease.

Important distinction: **condition** vs **terms**

In:

> **terms and conditions**

terms

= details/rules of an agreement

conditions

= specific requirements or circumstances that must be satisfied

The two overlap, which is why they often appear together.

Countability note

Condition changes number behaviour by sense.

Countable

> a medical condition

> a condition of the agreement

Singular state

> "The car is in good condition."

Here, **condition** usually appears uncountably in the fixed pattern:

> in good/bad condition

Plural environmental sense

> harsh conditions

> working conditions

This distinction is very useful for learners.

The Golden Manual recommends noting countability where it affects natural usage.

Family-extension note

The practical modern family includes:

- * **condition**
- * **conditions**
- * **conditioned**
- * **conditioning**
- * **conditional**
- * **conditionally**

Useful constructions include:

- * in good condition
- * harsh conditions
- * working conditions
- * medical condition
- * on condition that
- * terms and conditions
- * conditioned response
- * hair conditioner / condition hair

A related noun **conditioner** is also useful:

- * hair conditioner
- * air conditioner

However, **air conditioner** is lexicalized enough that it is best treated as a compound family extension rather than another sense of bare **condition**.

The Golden Manual asks us to sweep derivations and compounds broadly but label them accurately rather than count them mechanically as base-word meanings.
