

Word family: ****norm / normal / normally / normality / normalcy / normalize / normalization / abnormal / normative****

****Core family:**** norm → normal → normally → normality / normalcy → normalize → normalization

****Important related forms:****

****norm / norms****

****normal / normals****

****normally****

****normality****

****normalcy****

****normalize / normalise****

****normalized / normalised****

****normalization / normalisation****

****abnormal****

****abnormally****

****abnormality****

****normative****

****normatively****

****normed****

****Part of speech:**** noun (名詞) / adjective (形容詞) / adverb (副詞) / verb (動詞) / related technical and academic forms (相關技術及學術用法)

Your passage contains:

> “These days I usually see her once a week, ****normally on Sunday afternoon****.”

Here, ****normally**** means:

****usually; in the ordinary or expected pattern.****

****繁體中文： **通常；一般情況下；按平常習慣****

Meaning in this passage

In:

> ****normally on Sunday afternoon****

****normally**** tells us that:

* Sunday afternoon is the usual pattern;

* it is not necessarily true every single week;

* exceptions can happen.

So:

> **normally = usually / as is ordinarily the case**

**中文翻譯： **

> “I usually see her once a week, normally on Sunday afternoon.”

「我通常每星期探望她一次，**一般都是星期日下午**。」

This is the exact passage meaning.

1. **normal = usual / expected (正常的；通常的) — 符合平常情況的**

This is the central everyday meaning.

Meaning: Usual, expected, or typical in a particular situation.

Practice 1

> “It’s **normal** to feel nervous before an interview.”

「面試前感到緊張是很**正常的**。」

Practice 2

> “Everything returned to **normal** after the storm.”

「暴風雨過後，一切恢復了**正常**。」

normal = 符合一般情況、平常模式或合理預期的

2. **normal = ordinary rather than unusual (普通的) — 一般；平常**

Practice 3

> “It was a **normal working day**.”

「那只是一個**普通工作日**。」

Practice 4

> “She wants to live a normal life.”

「她想過**正常 / 平凡的生活**。」

normal = 沒有特別異常、特殊或極端之處

This overlaps strongly with sense 1 and should not be over-split.

3. **normal conditions/circumstances (正常情況) — 一般 / 正常狀況**

Practice 5

> “Under **normal circumstances**, the journey takes an hour.”

「在**正常情況下**，車程需時一小時。」

Practice 6

> “The machine works well under normal conditions.”

「這部機器在**正常條件下**運作良好。」

normal conditions = 沒有異常干擾、危機或特殊變化的通常情況

4. **normally = usually (通常) — 通常；一般**

This is the exact passage use.

Practice 7 — Original

> “I see her once a week, **normally on Sunday afternoon**.”

「我每星期見她一次，**通常是在星期日下午**。」

Practice 8

> “I **normally** leave work at six.”

「我**通常**六點下班。」

Practice 9

> “She normally drinks tea in the morning.”

「她早上**通常**會喝茶。」

****normally = 按一般習慣 / 最常見模式而言****

5. ****normally = under ordinary conditions (在正常情況下) — 一般而言 ; 正常情況下****

A second important adverb use.

Practice 10

> “The door would ****normally**** be locked at night.”

「這扇門晚上**正常情況下**會上鎖。」

Practice 11

> “This process normally takes two days.”

「這個流程**一般情況下**需時兩天。」

****normally = 如果沒有特殊情況 / 例外 , 通常會如此****

This differs slightly from pure habitual “usually,” but the two are closely related.

6. ****back to normal / return to normal (恢復正常) — 回復正常狀態****

A major fixed expression.

Practice 12

> “Things are finally ****back to normal****.”

「事情終於**恢復正常**了。」

Practice 13

> “Her temperature returned to normal.”

「她的體溫**恢復正常**。」

****return to normal = 由異常 / 特殊狀態回到平常或預期狀態****

7. ****the normal (正常狀態) — 常態 ; 正常水平****

Here ****normal**** functions as a noun-like form.

Practice 14

> “We are slowly returning to ****the normal****.”

This is possible but less idiomatic than:

> “returning to ****normal****.”

Practice 15

> “Demand is now close to normal.”

「需求現在已接近****正常水平****。」

For learners, the most natural form is usually:

> ****return to normal****

rather than:

> ****the normal****

8. ****normal = healthy / functioning as expected (正常的) — 身體 / 功能正常****

A major medical and functional extension.

Practice 16

> “Her blood pressure is ****normal****.”

「她的血壓****正常****。」

Practice 17

> “The test results were normal.”

「檢查結果**正常**。」

****normal = 身體功能、測量值或檢查結果處於預期 / 健康範圍****

This is context-specific and should not be interpreted as “average person.”

9. ****normal range (正常範圍) — 正常值範圍****

Practice 18

> “The result is within the ****normal range****.”

「結果在****正常範圍****內。」

Practice 19

> “Her temperature is above the normal range.”

「她的體溫高於****正常範圍****。」

****normal range = 某項測量在特定人口 / 情況下被視為典型或健康的範圍****

10. ****normal = mentally/socially ordinary — usage caution (正常的人 ?) ****

This requires caution.

Historically and informally, people sometimes use:

> “a normal person”

to mean:

> an ordinary/typical person.

Practice 20

> “He just wants to have a ****normal life****.”

「他只想過****普通的生活****。」

Practice 21

> “Her reaction was completely normal.”

「她的反應完全**正常**。」

But when talking about:

- * disability;
- * neurodivergence;
- * mental health;
- * identity;

calling one group:

> **normal**

can imply that another group is “abnormal” in a stigmatizing way.

So learners should often prefer more precise descriptions.

11. **norm = usual standard or pattern (常規 ; 常態) — 慣例 ; 一般標準**

A major related noun.

Meaning: A pattern, behaviour, or standard that is usual or expected in a group or situation.

Practice 22

> “Working from home has become the **norm**.”

「在家工作已成為**常態**。」

Practice 23

> “Long hours are the norm in that industry.”

「長工時在那個行業是**常態**。」

the norm = 某群體 / 情況中通常、普遍或預期會發生的模式

12. **the norm (常態) — 普遍情況 ; 慣常模式**

Practice 24

> “Online meetings are now **the norm**.”

「網上會議現在已成為**常態**。」

Practice 25

> “That kind of flexibility is not the norm.”

「那種彈性並不是**普遍情況**。」

the norm = 普遍接受 / 最常見的情況

13. **norm** = accepted social rule (社會規範) — 規範 ; 行為準則

A major sociological meaning.

Practice 26

> “Social **norms** change over time.”

「社會**規範**會隨時間改變。」

Practice 27

> “Different cultures have different norms.”

「不同文化有不同的**行為規範 / 慣例**。」

norm = 群體對甚麼行為適當、可接受或預期的共同準則

This is stronger than simply:

> “what usually happens.”

It can carry social expectations.

14. **social/cultural norms** (社會 / 文化規範) — 社會慣例 ; 行為標準

Practice 28

> “Dress codes reflect cultural ****norms****.”

「衣著規定反映文化****規範****。」

Practice 29

> “Some social norms are changing quickly.”

「一些社會****規範****正在迅速改變。」

****social norm = 某個社群普遍認為應該 / 不應該怎樣做的行為標準****

15. ****norm = standard for comparison (標準) — 基準 ; 標準****

A broader formal meaning.

Practice 30

> “The results were compared with the ****norm****.”

「結果與****標準值 / 常模****比較。」

Practice 31

> “The score was above the norm for that age group.”

「分數高於該年齡組的****常模水平****。」

****norm = 用來比較、評估個人 / 結果的標準或典型水平****

Common in psychology, education, statistics, testing.

16. ****norms = statistical/testing standards (常模) — 常模 ; 標準值****

Practice 32

> “The test was developed using age-based ****norms****.”

「這項測驗使用按年齡建立的****常模****。」

Practice 33

> “Scores are interpreted against population norms.”

「分數會按人口**常模**解讀。」

****norms = 根據某參照群體建立的比較標準****

This is a useful specialist sense.

17. ****normality = state of being normal (正常狀態) — 正常 ; 常態****

A major abstract noun.

Practice 34

> “People wanted a return to ****normality****.”

「人們希望****恢復正常生活 / 常態****。」

Practice 35

> “A sense of normality gradually returned.”

「****正常感 / 常態****逐漸恢復。」

****normality = 一切處於平常、穩定或預期狀態的情況****

18. ****normalcy = normal state (正常狀態) — 常態 ; 正常狀況****

A close synonym of ****normality****, especially common in American English.

Practice 36

> “People were eager for a return to ****normalcy****.”

「人們渴望****恢復常態****。」

Practice 37

> “Daily routines gave them a sense of normalcy.”

「日常生活讓他們重新有了****正常生活的感覺****。」

****normalcy = normality ; 正常 / 平常狀態****

Usage note:

- > ****normality**** is widely standard internationally.
- > ****normalcy**** is particularly common in American English.

Both are standard modern words.

19. ****normalize = make something normal/standard (使正常化) — 使恢復正常 ; 使成為常態****

A major verb.

Practice 38

- > “It took time for life to ****normalize****.”

「生活花了一段時間才****恢復正常****。」

Practice 39

- > “The treatment helped normalize her blood pressure.”

「治療幫助她的血壓****恢復正常****。」

****normalize = 令某個狀態回到正常 / 標準範圍****

20. ****normalize = make something socially accepted/common (使常態化) — 令某事變得普遍 / 被接受****

A major modern social-discourse sense.

Practice 40

- > “The campaign aims to ****normalize conversations about stress****.”

「這項活動希望令談論壓力變得****正常而普遍 / 不再避諱****。」

Practice 41

- > “Repeated exposure can normalize certain behaviours.”

「反覆接觸可能令某些行為逐漸**被視為正常 / 常態化**。」

****normalize X = 令原本被視為不尋常、尷尬或不被接受的事情變成普通 / 可接受****

This can be neutral, positive, or negative depending on what is being normalized.

21. ****normalize = standardize data/values (標準化) — 正規化 ; 標準化****

A major technical meaning.

Practice 42

> “The data were ****normalized**** before analysis.”

「分析前先把數據****標準化 / 正規化****。」

Practice 43

> “The values are normalized to a common scale.”

「這些數值被****正規化到同一尺度****。」

****normalize = 按指定規則調整數值，使它們可在一致尺度 / 格式下比較或處理****

Common in:

- * statistics;
- * machine learning;
- * databases;
- * signal processing;
- * mathematics.

22. ****normalize = adjust to a standard reference (校正 / 標準化) — 調整到標準****

Practice 44

> “The measurements were normalized for body size.”

「測量結果按體型進行了****標準化調整****。」

Practice 45

> “Researchers normalized the results across groups.”

「研究人員把不同群體的結果進行了**標準化**。」

normalize = 消除某些尺度 / 條件差異，使結果可公平比較

23. **normalization = return to normal (正常化) — 恢復正常**

Practice 46

> “The **normalization** of daily life took several months.”

「日常生活的**正常化 / 恢復常態**花了幾個月。」

Practice 47

> “Relations gradually moved toward normalization.”

「關係逐步走向**正常化**。」

normalization = 由異常 / 特殊狀態回復到正常狀態的過程

24. **normalization = making something accepted/common (常態化) — 使.....被視為正常**

Practice 48

> “The **normalization** of remote work changed office culture.”

「遙距工作的**常態化**改變了辦公文化。」

Practice 49

> “They discussed the normalization of unhealthy behaviour.”

「他們討論了不健康行為被**常態化**的問題。」

normalization = 某行為 / 觀念逐漸變成普遍、可接受或不再被視為異常的過程

25. **normalization = technical standardization (正規化 / 標準化) — 技術處理**

Practice 50

> “Data **normalization** improves comparability.”

「數據**標準化**能提高可比較性。」

Practice 51

> “Database normalization reduces unnecessary duplication.”

「資料庫**正規化**可以減少不必要的重複資料。」

normalization = 按技術規則把資料 / 數值 / 結構調整至標準形式

This is an established domain meaning, but exact Chinese varies by field:

* 統計 / ML : 標準化 / 正規化

* 資料庫 : 正規化

26. **normalized** = returned to normal (恢復正常的) — 已正常化

Practice 52

> “Her temperature has **normalized**.”

「她的體溫已經**恢復正常**。」

Practice 53

> “Conditions gradually **normalized**.”

「情況逐步**恢復正常**。」

normalized = 已回到正常 / 預期狀態

27. **normalized** = converted to a standard form (標準化的) — 已正規化

Practice 54

> “The chart uses **normalized data**.”

「圖表使用**標準化數據**。」

Practice 55

> “The normalized scores are easier to compare.”

「**標準化後的分數**較容易比較。」

normalized = 已根據指定規則調整到共同標準 / 尺度

28. **abnormal = not normal (異常的) — 不正常 ; 異常**

The major opposite form.

Practice 56

> “The test showed an **abnormal result**.”

「檢查顯示一項**異常結果**。」

Practice 57

> “The machine is making an abnormal noise.”

「機器正在發出**異常聲音**。」

abnormal = 偏離通常、健康、預期或標準狀態

29. **abnormal = medically unusual (醫學異常) — 不正常 ; 異常**

Practice 58

> “The scan revealed **abnormal tissue**.”

「掃描發現了**異常組織**。」

Practice 59

> “Doctors noticed an abnormal heart rhythm.”

「醫生發現了**異常心律**。」

****abnormal = 在醫學 / 生理上偏離正常結構、功能或測量範圍****

30. ****abnormally (異常地) — 異常 ; 超出正常程度****

Practice 60

> “The temperature was ****abnormally high****.”

「溫度****異常地高****。」

Practice 61

> “She was breathing abnormally fast.”

「她的呼吸速度****異常地快****。」

****abnormally = 以偏離一般 / 預期範圍的程度****

31. ****abnormality (異常 ; 異常現象) — 異常 ; 異常之處****

Practice 62

> “The scan showed no ****abnormalities****.”

「掃描沒有顯示任何****異常****。」

Practice 63

> “The doctor detected a minor abnormality.”

「醫生發現了一個輕微****異常****。」

****abnormality = 偏離正常結構、狀態、功能或模式的情況 / 部分****

Especially common in medical and scientific contexts.

32. ****normative = relating to what should be normal/right (規範性的) — 規範性的 ; 涉及應然標準****

This is a major academic extension from ****norm****, but its meaning has moved beyond simply

“normal.”

****Meaning:**** Concerned with standards, rules, values, or judgments about how things ****should**** be.

Practice 64

> “That is a ****normative judgment****.”

「那是一個****規範性判斷 / 價值判斷****。」

Practice 65

> “The discussion includes normative questions about fairness.”

「討論包含關於公平的****規範性 / 應然問題****。」

****normative = 涉及規則、價值、標準或『應該怎樣』的判斷****

This is common in:

- * ethics;
- * economics;
- * law;
- * political theory;
- * social science.

33. ****normative vs descriptive (規範性 vs 描述性) — 應然 vs 實然****

A crucial academic contrast.

Practice 66

> “A ****descriptive**** claim says what is happening; a ****normative**** claim says what should happen.”

「****描述性****說法講實際發生甚麼；****規範性****說法講應該發生甚麼。」

Practice 67

> “The argument moves from descriptive evidence to a normative conclusion.”

「論證由描述性證據走向****規範性結論****。」

****normative = what ought to be****

****descriptive = what is****

This is a genuinely useful distinct family meaning.

34. ****normatively** (從規範角度) — 規範上 ; 就應然而言******

Practice 68

> “The policy is difficult to defend ****normatively****.”

「從****規範 / 價值層面****來看，這項政策很難辯護。」

Practice 69

> “The question can be examined empirically and normatively.”

「這個問題可以從實證和****規範角度****研究。」

****normatively = 根據應然標準、價值或規範來判斷****

More academic and lower-frequency.

35. ****normed** = compared/standardized against a norm (常模化的) — 按常模標準化******

A technical form.

Practice 70

> “The test is ****normed**** for children aged six to ten.”

「這項測驗已按六至十歲兒童建立****常模****。」

Practice 71

> “The scores were normed against a national sample.”

「分數以全國樣本作為****常模參照****。」

****normed = 根據某個參照群體 / 標準建立比較基準****

Common in educational/psychological testing.

36. **normal distribution** (常態分布 / 正態分布) — 統計學常態分布

A major technical compound worth retaining.

Practice 72

> “The data approximately follow a **normal distribution**.”

「數據大致符合**常態分布 / 正態分布**。」

Practice 73

> “A normal distribution has a familiar bell-shaped curve.”

「**常態分布**具有常見的鐘形曲線。」

normal distribution = 統計學中一種特定機率分布，不等於泛指『普通的分布』

This is a lexicalized statistical term.

37. **normal value/range** (正常值) — 正常參考值

Practice 74

> “The result is close to the **normal value**.”

「結果接近**正常值**。」

Practice 75

> “Normal ranges can differ between laboratories.”

「不同實驗室的**正常參考範圍**可能不同。」

normal value/range = 被用作參考的典型 / 健康 / 預期數值範圍

38. **normal** = perpendicular in mathematics/geometry (法線 / 垂直的) — 法向的；法線

A genuine technical sense, but specialist.

Practice 76

> “The line is **normal to** the surface.”

「這條線與表面**垂直 / 沿法線方向**。」

Practice 77

> “The normal vector points away from the surface.”

「**法向量**指向表面外側。」

normal = 在數學 / 物理中，與某條線、平面或表面成直角的

This is a genuine separate domain meaning but lower priority for general learners.

39. **normal force** (正向力 / 法向力) — 法向力

A common physics term.

Practice 78

> “The table exerts a **normal force** on the book.”

「桌子對書本施加**法向力 / 正向力**。」

Practice 79

> “The normal force acts perpendicular to the surface.”

「**法向力**垂直作用於表面。」

normal force = 表面對接觸物體施加、方向垂直於表面的力

Technical but established.

40. **normal** = noun in mathematics: a normal line/vector (法線 / 法向量) — 法線

Practice 80

> “Draw a **normal** to the curve at this point.”

「在這一點畫一條曲線的**法線**。」

Practice 81

> “The normal is perpendicular to the tangent.”

「**法線**與切線垂直。」

a normal = 數學中與曲線 / 表面垂直的線或方向

Specialist, but genuinely distinct.

Important distinction: **normal** vs **usual**

These overlap strongly.

usual

= what happens most often for a particular person/situation.

normal

= what fits the expected or ordinary pattern.

Compare:

> “My usual breakfast is toast.”

= 我平常最常吃的早餐。

> “It is normal to feel tired after exercise.”

= 運動後疲倦很正常。

Usual emphasizes frequency/habit.

Normal emphasizes conformity with expectation.

Important distinction: **normally** vs **usually**

These are very close.

usually

focuses mainly on:

> frequency.

normally

can mean:

> usually

or:

> under normal circumstances.

Compare:

> “I usually visit on Sunday.”

= 我的習慣如此。

> “I would normally visit on Sunday, but I’m away this week.”

= 正常情況下我會星期日探望，但今星期是例外。

In your passage, both meanings are very close.

Important distinction: **normal vs ordinary**

normal

= expected / not abnormal.

ordinary

= not special, remarkable, or unusual.

Compare:

> “a normal temperature”

= 正常體溫

not:

> ordinary temperature

in the same technical sense.

But:

> “an ordinary day”

= 平凡的一天.

Important distinction: **normal vs average**

This is crucial.

average

= mathematically/statistically central or typical in quantity.

normal

= within an expected/accepted pattern or range.

Something can be:

> normal but not average.

For example, many values can lie inside a normal range without equaling the average.

Important distinction: **normal vs typical**

typical

= showing the characteristics expected of a particular category.

normal

= within the ordinary/expected condition.

> “That behaviour is typical of him.”

means:

> characteristic of him.

> “That behaviour is normal.”

means:

> not unusual/abnormal in that context.

Different focus.

Important distinction: **normal vs common**

common

= occurs frequently / exists in many cases.

normal

= regarded as ordinary or expected.

Something can be:

> common but not desirable,

and something can be:

> normal without being extremely common.

Important distinction: **normal vs natural**

normal

= fits usual/expected pattern.

natural

= arises from nature or happens without artificial intervention; also can mean unsurprising.

They overlap in some contexts but are not interchangeable.

Important distinction: **normal vs healthy**

This matters especially in medical contexts.

normal

= within expected reference range.

healthy

= in good health.

A result can be:

> statistically normal

without proving that a person is completely healthy.

And what is healthy is not always defined simply by population average.

Important distinction: **normal vs acceptable**

normal

= expected/usual.

acceptable

= allowed or considered good enough.

Something can be:

> normal but unacceptable.

For example, a common bad habit may be normal in the descriptive sense but still not acceptable.

Important distinction: **normal vs normative**

This is extremely important.

normal

= what is ordinary/expected.

normative

= what is judged to be right, appropriate, or what **should** happen according to a standard/value.

So:

> normal = descriptive tendency

> normative = evaluative standard

Do not treat them as synonyms.

Important distinction: **norm vs normal**

norm

is usually a noun:

> “That is the norm.”

= 那是常態 / 規範。

normal

is usually an adjective:

> “That is normal.”

= 那是正常的。

Compare:

> “Working late is the norm.”

vs:

> “Working late is normal there.”

Closely related but different grammar.

Important distinction: ****norm = common pattern vs norm = rule****

This is one of the central polysemy distinctions.

Pattern:

> “Remote work became the norm.”

= 成為常態。

Social rule:

> “Social norms influence behaviour.”

= 社會規範影響行為。

The first is:

> what commonly happens.

The second is:

> what people are expected to do.

Important distinction: ****normality vs normalcy****

Both mean:

> the state of being normal.

****normality****

= broadly standard internationally.

****normalcy****

= especially common in American English.

Neither needs to be treated as semantically different in ordinary use.

Do not manufacture separate meanings merely because the forms differ.

Important distinction: ****normalize = restore vs normalize = make accepted****

Compare:

> “Treatment normalized her blood pressure.”

= 使血壓恢復正常。

versus:

> “The campaign helped normalize talking about stress.”

= 令談論壓力變成正常 / 普遍被接受的事情。

These are related but meaningfully different:

1. ****return to a standard state****
2. ****make socially ordinary/accepted****

Important distinction: ****normalize = social vs technical****

Social:

> “normalize asking for help”

= 令求助變成普遍 / 正常被接受。

Technical:

> “normalize the data”

= 按數學 / 統計規則調整數據。

Do not translate both mechanically as:

> 正常化.

Technical contexts often require:

> ****標準化 / 正規化****

instead.

Important distinction: **normalization vs standardization**

These can overlap technically but are not universally identical.

normalization

often means:

> transform data/structure according to a specified normalization rule.

standardization

often means:

> bring things to a common standard or, in statistics, transform values according to a particular scaling convention.

Exact meanings depend on field.

Learners should follow domain-specific usage rather than assuming they are interchangeable.

Important distinction: **abnormal vs unusual**

unusual

= not common / unexpected.

abnormal

= deviates from a normal standard, pattern, structure, or function.

Abnormal often sounds:

- * more technical;
- * more medical;
- * more strongly evaluative.

For ordinary harmless differences, **unusual** is often softer and more natural.

Important distinction: **abnormal vs strange**

strange

= odd / unfamiliar / surprising.

abnormal

= deviating from a defined or expected norm.

A strange sound may simply be unfamiliar.

An abnormal sound suggests something is functioning outside its expected pattern.

Important distinction: **abnormal vs atypical**

atypical

= not typical of the usual pattern.

abnormal

= outside the expected/normal state.

Atypical can be more neutral in some medical/scientific contexts.

Important distinction: **normal distribution vs normal data**

A:

> **normal distribution**

is a specific statistical distribution.

Saying:

> “the data are normal”

in a statistics context often means:

> the data approximately follow a normal distribution,

not merely:

> the data look ordinary.

Domain context completely changes interpretation.

Important distinction: **normal force vs ordinary force**

Normal force does **not** mean:

> ordinary/common force.

It means:

> a force perpendicular to a surface.

This is a true domain-specific lexical meaning.

Important distinction: **normal to a surface vs normal surface**

normal to the surface

= perpendicular to the surface.

This technical **normal** should never be translated:

> 正常的.

It is:

> 法向的 / 垂直的.

Important distinction: **return to normal vs normalize**

return to normal

= become normal again.

normalize

can be transitive or intransitive:

> “Conditions normalized.”

> “The treatment normalized the values.”

Both describe movement toward a normal state, but **normalize** is more formal/technical.

Important distinction: **normal life vs ordinary life**

normal life

often implies:

> life without disruption, illness, crisis, or unusual restriction.

ordinary life

often implies:

> everyday, unremarkable life.

Subtle difference:

> normality vs lack of specialness.

Important distinction: **normal person — caution**

The phrase can be grammatically correct, but it is often too vague.

Instead of:

> “normal people”

prefer the exact contrast when possible:

- * people without the condition;
- * typical users;
- * the general population;
- * people in the comparison group.

This avoids accidentally turning a statistical or contextual distinction into a judgment about a person's value.

Family-extension sweep

The practical **normal / norm** family is rich across everyday, social, medical, technical, statistical, and academic domains:

- * **normal** — usual/expected = 正常的 / 平常的
- * **normal conditions** = 正常情況
- * **return to normal** = 恢復正常
- * **normal range/value** = 正常範圍 / 正常值
- * **normally** — usually = 通常
- * **normally** — under ordinary conditions = 正常情況下
- * **norm** — usual pattern = 常態
- * **the norm** = 普遍情況 / 常態
- * **norm** — social rule = 社會規範
- * **social/cultural norms** = 社會 / 文化規範
- * **norm** — reference standard = 標準 / 常模
- * **testing norms** = 測驗常模
- * **normality** = 正常狀態 / 常態
- * **normalcy** = 正常狀態 / 常態
- * **normalize** — restore to normal = 正常化 / 恢復正常
- * **normalize** — make socially accepted = 常態化
- * **normalize data** = 標準化 / 正規化數據
- * **normalization** — return to normal = 正常化
- * **normalization** — social acceptance = 常態化
- * **normalization** — technical = 正規化 / 標準化
- * **normalized** = 已正常化 / 已標準化
- * **abnormal** = 異常的
- * **abnormally** = 異常地
- * **abnormality** = 異常 / 異常現象
- * **normative** = 規範性的 / 應然的
- * **normatively** = 從規範 / 價值角度
- * **normed** = 按常模建立 / 標準化
- * **normal distribution** = 常態分布 / 正態分布
- * **normal to a surface** = 垂直 / 法向
- * **normal force** = 法向力
- * **a normal** — mathematics = 法線

The main semantic branches are:

> **ordinary / expected state**

- > **usual pattern**
- > **social rule or standard**
- > **reference norm for comparison**
- > **restoring/making something normal**
- > **making something socially accepted**
- > **technical normalization**
- > **abnormal deviation**
- > **normative “what ought to be” standards**
- > **specialized mathematical/physical perpendicularity**

Master comparison

Form / sense	MCQ-ready Traditional Chinese meaning
-----	-----
normal — usual/expected	符合一般情況、平常模式或合理預期的
normal — ordinary	沒有特別異常、特殊或極端之處的
normal conditions	沒有特殊干擾 / 異常情況下的通常狀態
normal — medical/function	身體功能、測量值或系統運作處於預期 / 參考範圍
normal range/value	某項測量被視為典型 / 健康 / 預期的參考範圍或數值
normally — usually	按一般習慣或最常見模式而言；通常
normally — ordinary conditions	若沒有特殊情況或例外，正常情況下會如此
norm — usual pattern	某群體 / 情況中最普遍、最常見的模式；常態
norm — social rule	群體對適當 / 可接受行為形成的共同規範
norm — reference standard	用來比較或評估個人 / 結果的典型標準 / 常模
normality	一切處於平常、穩定或預期狀態的情況
normalcy	normality；正常 / 常態，尤常見於美式英語
normalize — restore	令某狀態回到正常 / 標準範圍
normalize — social	令原本較不尋常 / 不被接受的事變得普通或被接受
normalize — technical	按指定規則調整數據 / 結構，使其符合共同尺度或形式
normalization — ordinary	由異常 / 特殊狀態恢復到正常狀態的過程
normalization — social	某行為 / 觀念逐漸被視為普通 / 可接受的過程
normalization — technical	把資料、數值或結構調整到特定標準形式的技術過程
abnormal	偏離通常、健康、預期或標準狀態的
abnormally	超出一般 / 預期程度地

abnormality	偏離正常結構、功能、狀態或模式的部分 / 現象	
normative	涉及規則、價值、標準或「應該怎樣」的判斷	
normatively	從價值 / 規範 / 應然標準來判斷	
normed	已根據某參照群體 / 標準建立比較基準	
normal distribution	統計學中特定的鐘形機率分布	
normal — mathematical	與指定線、平面或表面成直角 / 法向的	
normal force	由接觸表面施加、方向垂直於表面的力	

For your original passage

> “These days I usually see her once a week, ****normally on Sunday afternoon****.”

The exact meaning is:

****normally = usually / in the ordinary pattern****

Therefore:

> ****normally on Sunday afternoon****

= ****「一般 / 通常是在星期日下午」****

There is a subtle but useful difference between the two adverbs already in your sentence:

> “I ****usually**** see her once a week, ****normally**** on Sunday afternoon.”

Here:

****usually****

describes the frequency pattern:

> most weeks, you see her once.

****normally****

describes the ordinary timing:

> when the visit happens, Sunday afternoon is the normal arrangement.

So the sentence could naturally be understood as:

> ****usually**** = 多數時候 / 通常

> ****normally**** = 按平常安排 / 一般情況下

The most important learner contrasts are:

> ****a normal day****

> = 正常 / 普通的一天

> ****under normal circumstances****

> = 正常情況下

> ****return to normal****

> = 恢復正常

> ****normal blood pressure****

> = 正常血壓

> ****normally on Sunday****

> = 通常 / 一般在星期日

> ****working from home is the norm****

> = 在家工作已成常態

> ****social norms****

> = 社會規範

> ****testing norms****

> = 測驗常模

> ****normality / normalcy****

> = 正常狀態 / 常態

> ****normalize blood pressure****

> = 令血壓恢復正常

> ****normalize talking about stress****

> = 令談論壓力變得正常 / 常態化

> ****normalize the data****

> = 把數據標準化 / 正規化

> ****abnormal result****

> = 異常結果

> ****abnormality****

> = 異常現象

> ****normative judgment****

> = 規範性 / 價值判斷

> ****normal distribution****

> = 常態 / 正態分布

> ****normal force****

> = 法向力

So this family is much richer than:

> ****normal = 正常****

The most useful conceptual map is:

****NORM****

→ a standard, pattern, or rule

****NORMAL****

→ conforming to the expected pattern

****NORMALLY****

→ usually / under ordinary conditions

****NORMALITY / NORMALCY****

→ the state of being normal

****NORMALIZE****

→ make/return something to a normal or standardized state

****NORMALIZATION****

→ the process of doing so

****ABNORMAL****

→ deviating from the normal pattern

****NORMATIVE****

→ concerned not with what *is* normal, but with what *ought* to be according to a standard or value

And in your original passage:

****normally = “according to the usual pattern — generally on Sunday afternoon.”****
