rescued = 已經從危險、受困或不安全狀態中被救出的

Important distinction: **rescue vs save**

These overlap strongly.

save

is much broader:

- * save a life
- * save money
- * save time
- * save a file
- * save food

rescue

specifically focuses on:

> removing someone/something from **danger, entrapment, serious difficulty, or likely loss**

Compare:

> “The firefighter rescued him.”

= 消防員把他從危險中救出。

> “The treatment saved his life.”

= 治療保住了他的性命。

So **rescue** usually includes a dangerous/difficult situation from which someone is removed.

Important distinction: **rescue vs help**

help

= provide assistance generally.

rescue

= help someone out of serious danger or difficulty.

> “I helped him carry the box.”

does not mean:

> “I rescued him.”

So **rescue** is much stronger.

Important distinction: rescue vs recover

rescue

= save from danger/loss.

recover

= get something back after it was lost, stolen, damaged, etc.

> “Firefighters rescued the child.”

> “Police recovered the stolen car.”

Sometimes both can apply to objects, but the focus differs.

Important distinction: rescue vs evacuate

rescue

= remove someone from immediate danger, often because they cannot get out safely themselves.

evacuate

= systematically move people away from a dangerous area.

> rescuing trapped people

versus:

> evacuating a building before danger spreads.

Important distinction: **rescue vs escape**

rescue

someone else helps remove you from danger.

escape

you get away from danger yourself.

> “The climber was rescued.”

= 別人救出他。

> “The climber escaped.”

= 他自己成功脫險。

Important distinction: **rescue vs relief**

rescue

focuses on:

> saving/removing people from danger.

relief

focuses on:

> providing food, shelter, medical aid, money, etc. after or during hardship/disaster.

So:

> rescue workers

may extract people,

while:

> relief workers

may provide aid afterward.

Important distinction: **rescue centre vs shelter**

rescue centre

focuses on:

> rescue, intake, emergency assistance, rehabilitation.

shelter

focuses on:

> providing a safe place to stay.

An animal rescue centre may contain a shelter, but the terms are not identical.

Important distinction: **rescue centre vs rescue station**

rescue centre

often emphasizes:

> coordinated services, intake, care, or operations.

rescue station

more strongly suggests:

> an operational post where rescue personnel/equipment are based.

Both can exist, but the emphasis differs.

Important distinction: **rescue team vs emergency services**

rescue team

= a particular group trained to locate and save people.

emergency services

= broad category including:

- * police
- * fire service
- * ambulance
- * rescue units

So rescue teams are one part of the wider emergency-response system.

Important distinction: **rescue = literal vs figurative**

Literal:

> “They rescued a child from the river.”

= 從河裡救出小孩。

Figurative:

> “The funding rescued the project.”

= 資金挽救了項目。

The figurative mapping is:

> physical danger → serious risk of failure/loss.

Important distinction: **come to the rescue vs rescue**

rescue someone

direct verb:

> “She rescued me.”

come to someone’s rescue

idiom:

> “She came to my rescue.”

The second often sounds more conversational and can refer to minor difficulties as well as genuine

danger.

Important distinction: **rescue package vs bailout**

These overlap in finance.

rescue package

is broader and relatively neutral:

> measures/money designed to save an institution.

bailout

specifically refers to:

> financial assistance given to prevent failure.

Bailout can carry stronger political/evaluative overtones depending on context.

Family-extension note

Rescue is a solid moderate polysemy word.

Its central semantic concept is:

> **remove someone/something from serious danger, difficulty, or likely loss**

From that core we get:

* **literal human rescue**

* **animal rescue**

* **save an organization/project**

* **recover endangered data/property**

* **figurative social rescue** → rescue someone from embarrassment

* **financial rescue**

The noun then produces many useful domain compounds:

* **rescue operation**

* **rescue team**

* **rescue centre**

* **search and rescue**
* **rescue package**

and the family adds:

* **rescuer**
* **rescued**

These largely preserve the same rescue concept and should therefore be grouped rather than treated as unrelated meanings merely because the rescued “object” changes. That follows the manual’s semantic-core rule.

Master comparison

Form / sense	MCQ-ready Traditional Chinese meaning
-----	-----
rescue — person	把某人從危險、受困或可能受傷的情況中安全救出
rescue — animal	把受傷、受困、被虐或被遺棄動物帶到安全地方並提供幫助

rescue package/deal	為防止公司 / 機構陷入嚴重財務失敗而提供的援助安排
rescuer	負責把人 / 動物從危險中救出的救援人員
rescued	已從危險、受困或不安全情況中被救出的

For your original sentence

> “One minute, the living room becomes a space station, and the next it turns into a jungle, a castle, or even a **rescue centre**.”

The exact meaning is:

****rescue = 把人 / 動物從危險、受困或需要緊急幫助的情況中救出****

Therefore:

> ****rescue centre****

= ****「進行救援、接收或協助需要幫助者的救援中心」****

In Leo's imaginary world, the living room might suddenly become a place where he imagines:

> emergencies

> rescue teams

> people or animals needing help

> missions to save them

So this is the ordinary ****save-from-danger sense****, used as a noun modifier in:

> ****rescue + centre****.
