AO. IMPORTANT DISTINCTIONS

expand vs increase

increase

is the broadest word for becoming greater in:

- * number
- * amount
- * level

expand

often suggests greater:

- * size
- * scope
- * capacity
- * range

Compare:

- > increase prices
- > expand services

You would not normally say:

- > expand the price ❌

expand vs enlarge

enlarge

usually means make a particular physical object/image bigger.

expand

can be:

- * physical;
- * organizational;
- * conceptual;
- * economic.

- > enlarge a photograph
- > expand a business

expand vs extend

This is one of the most important distinctions.

expand

= become larger/broader overall.

extend

= make something longer or continue it farther in a particular direction/time.

- > expand a building
- > extend a road

- > expand services
- > extend opening hours

There is overlap.

expand vs broaden

broaden

emphasizes increased range/variety/perspective.

expand

is more general.

- > broaden your knowledge
- > expand your knowledge

Both work.

But:

- > gas expands

not:

- > gas broadens.

expand vs widen

widen

specifically means become wider or make a difference larger.

- > widen the road
- > widen the gap

expand

means increase overall size/scope.

expand vs grow

grow

is broad and often intransitive/natural.

- > business grows
- > plant grows

expand

often emphasizes deliberate increase in scale/scope.

> expand the business

But:

> the business expanded

is also natural.

expand vs develop

develop

= evolve/improve/build over time.

expand

= become larger/more extensive.

A programme can:

> develop new features

without becoming larger,

or:

> expand to more locations

without fundamentally changing its design.

expand vs scale

In modern business/tech:

scale

increase capacity/operations efficiently as demand grows.

expand

simply increase size/scope.

A business can expand but struggle to scale efficiently.

expand vs diversify

expand

become larger.

diversify

increase variety/types.

A company can expand by selling more of the same product without diversifying.

expand vs elaborate

For speaking/writing:

expand on an idea

give more detail.

elaborate on an idea

also give more detailed explanation.

Very close.

Elaborate usually focuses more specifically on explanation/detail; **expand** can also mean increasing the breadth of the discussion.

expand vs expound

expound a theory / expound on a subject

= explain systematically/in detail.

expand on a point

= add more detail.

****Expound**** is more formal.

Do not confuse the spelling.

****expand vs explain****

****explain****

make something understandable.

****expand****

add detail/scope.

You can expand an explanation without necessarily making it clearer.

****expand vs inflate****

****inflate****

often means fill with air/gas so something swells:

> inflate a balloon.

****expand****

describes the resulting increase in size:

> the balloon expands.

Inflate can also mean artificially increase prices/numbers.

****expand vs swell****

****swell****

means become enlarged, often through fluid or pressure.

Can be physical/biological.

expand

is neutral/broader.

> ankle swells

> gas expands

expand vs dilate

dilate

is more technical and often describes widening an opening:

* pupil

* blood vessel

* cervix

expand

means overall enlargement.

expand vs spread

spread

emphasizes extending over an area or distribution.

expand

emphasizes overall increase in extent.

> fire spreads

> city expands

expansion vs growth

growth

can describe natural increase or improved performance.

expansion

emphasizes increased scale/scope/area.

- > economic growth
- > business expansion

Often overlap.

expansion vs extension

expansion

= becoming larger in size/scope.

extension

= added part or continuation.

- > airport expansion
- > deadline extension

expansive vs expensive

A critical spelling trap.

expansive

= broad, extensive, open, talkative.

expensive

= costing a lot of money.

- > expansive view = 廣闊景觀
- > expensive view? ❌

> expensive apartment = 昂貴的單位

****expansive vs extensive****

****expansive****

often implies broad/open/spreading character.

****extensive****

means covering a large amount/area.

> expansive view

> extensive research

Overlap exists in “broad scope,” but collocations differ.

****expansive vs expansionary****

****expansive****

broad/open/large in scope.

****expansionary****

causing/intended to cause expansion, especially economics.

> expansive personality

> expansionary policy

Not interchangeable.

AP. GRAMMAR

161. ****expand can be intransitive****

> “The material expands when heated.”

> “The company expanded rapidly.”

No direct object.

162. **expand can be transitive**

163. **expand into + noun**

> expand into new markets

164. **expand from A to B**

> expand from 50 seats to 100

> expand by 25%

166. **expand to + final amount**

167. **expand on/upon**

Do not confuse:

> expand **into** a market

> expand **on** an argument.

AQ. COUNTABILITY

For your original sentence

> “...community centres or public libraries should **expand accessible study areas** during examination seasons.”

The exact meaning is:

expand = 在考試季節增加可讓學生使用的學習空間、座位或容量，使更多人能找到適當地方溫習

So:

> **expand accessible study areas**

= **擴大 / 增設可供學生使用的學習區**

This is broader than merely:

> **enlarge one existing room**

because **expand** could involve:

- * enlarging existing areas;
- * opening additional rooms;
- * adding seats;
- * extending usable areas;
- * increasing operating capacity.

For the core database, I would keep **6 major semantic branches** for **expand**:

1. **physically become/make larger**
2. **increase capacity, amount, or availability**
3. **grow a business, organization, geographic area, or market**

4. **increase the scope/range/content of something**
5. **expand on/upon = elaborate and give more detail**
6. **technical unfolding/enlargement in mathematics, science, and computing**

Then the family should explicitly index **expansion, expandable, expansive, expanse, expansionary, expansionism, expansionist, expander**, because those forms have developed substantial independent domain meanings that cannot safely be inferred from a single translation such as 「擴大」.
