Practice 159

> “Daily life is her main **source of inspiration**.”

「日常生活是她主要的**靈感來源**。」

Practice 160

> “The city became a source of inspiration for the artist.”

「這座城市成為藝術家的**靈感來源**。」

81. **source of motivation = 動力來源**

Practice 161

> “Her family is her strongest **source of motivation**.”

「她的家人是她最大的**動力來源**。」

Practice 162

> “External approval should not be your only source of motivation.”

「外界認可不應該成為你唯一的**動力來源**。」

Directly relevant to your passage’s message.

82. **source of comfort = 安慰來源**

Practice 163

> “Music became a **source of comfort** during difficult times.”

「在困難時期，音樂成為她的**安慰來源**。」

Practice 164

> “Friends can be an important source of comfort.”

「朋友可以是重要的**安慰來源**。」

83. **source of pride = 自豪來源；令人自豪的事物**

Practice 165

> “The achievement was a great **source of pride**.”

「這項成就是一件非常**令人自豪的事**。」

Practice 166

> “The bakery is a source of pride for the neighbourhood.”

「這間麵包店是社區的**驕傲**。」

Natural Chinese often shifts away from literal 「來源」 here.

84. **source of concern = 憂慮來源；令人擔心的事**

Practice 167

> “The rising cost is a **source of concern**.”

「不斷上升的成本是一件**令人擔心的事**。」

Practice 168

> “Online harassment has become a major source of concern.”

「網絡騷擾已成為一個主要的**憂慮來源**。」

Important distinction: **source vs cause**

source

= where something originates.

cause

= what makes something happen.

They often overlap, but not always.

> source of a smell

> = 氣味從哪裡來

> cause of the smell

> = 為甚麼會產生這種氣味

Example:

* source = leaking pipe

* cause = broken seal

So **source** emphasizes origin; **cause** emphasizes causation.

Important distinction: **source vs origin**

origin

= beginning/history of something.

source

= place/person/thing from which something comes or is obtained.

> origin of a tradition

> = 傳統的起源

> source of information

> = 資訊來源

They overlap with rivers and ideas, but not everywhere.

Important distinction: **source vs root**

root

figuratively:

= deepest underlying cause.

source

= broader origin/provider.

> root cause of the problem

> = 問題的根本原因

> source of the problem

> = 問題來源

Root usually implies something deeper/more fundamental.

Important distinction: **source vs supplier**

supplier

= person/company selling/providing goods.

source

= broader origin of the goods.

> supplier

> = 供應商本身

> source

> = 貨源 / 供應來源

A supplier may be one source.

Important distinction: **source vs resource**

Very easy to confuse.

source

= where something comes from.

resource

= something available for use.

> source of information

> = 資訊從哪裡來

> learning resource

> = 可供學習使用的材料

Completely different.

Important distinction: **source vs reference**

source

= original/provider of information.

reference

can be:

- * citation pointing to source;

- * material consulted;

- * mention of something.

A reference may direct you to a source.

Important distinction: **source vs evidence**

source

= where evidence/information comes from.

evidence

= material used to support a conclusion.

One source can contain several pieces of evidence.

Important distinction: **source vs citation**

source

= original information provider/material.

citation

= formal acknowledgement/location reference to that source.

> source = the book

> citation = bibliographic reference to that book

Important distinction: **source vs link**

A web link is not necessarily the source itself.

It may:

- * link to the original source;

- * link to a copy;

- * link to commentary about the source.

So:

> link ≠ source automatically

Important distinction: **source vs outlet in journalism**

source

= person/document providing the information.

outlet

= newspaper, website, broadcaster publishing the report.

> anonymous government source

> = 匿名政府消息人士

> news outlet

> = 新聞媒體機構

Very important.

Important distinction: **source vs author**

author

= person who wrote a text.

source

= material/person supplying information.

An author can use many sources.

Important distinction: **source — noun vs verb**

Noun:

> “We need a reliable source.”

= 我們需要一個可靠來源。

Verb:

> “We source ingredients locally.”

= 我們在本地採購食材。

Same word, very different grammatical function.

Important distinction: **source something vs obtain something**

obtain

= simply acquire/get.

source

= actively find a suitable supplier/origin and obtain from it.

> obtain flour

> = 取得麵粉

> source flour locally

> = 在本地尋找供應來源並採購麵粉

****Source**** carries procurement/origin information.

Important distinction: ****source vs outsource****

These look related but mean different things.

****source****

= find/obtain resources, materials, suppliers, people.

****outsource****

= have an external company/person perform work that could be done internally.

> source materials overseas

> = 從海外採購材料

> outsource customer service

> = 把客服外判

Do not confuse them.

Important distinction: ****source vs insource****

****outsource****

= external provider performs the work.

****insource****

= bring work/resources inside the organisation.

****source****

= locate/procure generally.

Important distinction: **source code vs software**

software/program

= executable/application system.

source code

= human-readable instructions used to create it.

A user may run software without seeing its source code.

Important distinction: **open source vs free of charge**

This is important.

open source

= source code is available under an open-source licence allowing specified use/modification/distribution.

It does **not automatically mean**:

> zero price in every context.

So:

> open-source $\neq$ simply “free”

Important distinction: **source language vs target language**

source language

= language being translated from.

target language

= language being translated into.

Example:

English → Traditional Chinese

* source language = English

* target language = Traditional Chinese

Important distinction: ****source text vs original text****

Often close, but:

**source text**

technical translation term:

= text being translated.

**original text**

= first/original version generally.

A source text could theoretically itself be a later edition or adapted version.

Important distinction: ****source of funds vs source of wealth****

Very important in finance/compliance.

**source of funds**

= where this specific money came from.

Example:

> sale of a house

**source of wealth**

= how the person's overall wealth was accumulated.

Example:

> business ownership over twenty years

Not interchangeable.

Important distinction: **energy source vs power source**

energy source

= general origin of usable energy.

> sunlight, wind, oil

power source

= immediate thing supplying energy to a device/system.

> battery, mains electricity

A battery is a power source for a phone; sunlight is an energy source.

Important distinction: **source of infection vs route of transmission**

source of infection

= where/pathogen came from.

route of transmission

= how it travelled to the next host.

Example:

> contaminated person = source

> droplets = route

Important medical distinction.

Important distinction: **source vs reservoir in epidemiology**

reservoir

= natural environment/host where pathogen normally lives and multiplies.

source

= immediate origin from which a particular host became infected.

These may be the same, but not necessarily.

Important distinction: ****source vs input****

****input****

= information/material fed into a process.

****source****

= origin from which that input comes.

> input data

> = 輸入資料

> data source

> = 資料來源

Important distinction: ****source vs destination****

In computing/networking:

****source****

= where data starts.

****destination****

= where data is sent.

> source address

> = 來源位址

> destination address

> = 目的位址

Important distinction: ****source vs sink****

In technical/scientific contexts:

source

= generates/releases something.

sink

= absorbs/removes it.

Examples:

* carbon source

* carbon sink

This forms an important scientific opposition.

Important distinction: **carbon source vs carbon sink**

carbon source

= releases more carbon than it absorbs.

carbon sink

= absorbs more carbon than it releases.

Example:

> Burning fossil fuels is a carbon source.

> 森林可作為 carbon sink.

This is a useful environmental extension.

Important distinction: **point source vs non-point source**

Environmental science:

point source

= pollution comes from one identifiable location.

non-point source

= diffuse pollution from many places.

Example:

> factory pipe = point source

> agricultural runoff across fields = non-point source

Important distinction: **source = statistics vs source = provider**

> “What is your source?”

can mean:

> 你的資料從哪裡來？

It does not necessarily mean:

> 給你資料的「人」

The source could be:

* person

* report

* dataset

* website

* experiment

* archive

Important distinction: **a source vs the source**

a source

= one among several origins/providers.

the source

= the specific/original origin being discussed.

> “a source of income”

> = 其中一個收入來源

> “the source of the leak”

> = 漏水的那個確切源頭

Context matters.

Important distinction: **source of confidence in your passage**

Your phrase:

> “main source of one's confidence”

does **not** mean:

* academic source,

* news source,

* water source,

* software source code,

* supplier.

It means:

> **the thing from which a person derives self-confidence**

The writer warns against making:

> likes + recognition + online approval

the main foundation from which confidence comes.

Family-extension sweep

Following the fullest-reference style, the useful inventory includes:

For your original sentence

> “I learned that recognition is enjoyable, but it is unreliable if it becomes the main **source** of one's confidence.”

The exact meaning is:

source = 一個人的自信主要「從哪裡來」；作者指出，如果自信主要來自網上 likes、陌生人的認可和外界注意，那種自信就很容易隨網絡反應而改變，因此並不穩固。

Natural translation:

> **「我明白到，被人認可是令人愉快的，但如果它成為一個人自信的主要來源，這種自信就並不可靠。」**

The highest-value contrasts are:

- > **source of confidence** → 自信來源
- > **source of a problem** → 問題根源
