

Absolutely — **mechanics** is a particularly good target because the plural-looking form has developed several established meanings of its own: **physics, movement technique, practical workings of a process, procedural details, game systems, writing conventions**, plus the separate plural of **mechanic = repair technician**.

In your passage, the key phrase is:

> “...a sprinter returning from a hamstring injury may need a progressive programme built around mobility and **acceleration mechanics**...”

I’m using the same Golden Manual principle: search very broadly across technical, figurative, grammatical, compound and family uses, but keep senses merged where one underlying concept still explains them.

Word family: **mechanic / mechanics / mechanical / mechanically / mechanism / mechanisms / mechanistic**

Base word: mechanic

Important lexical form: mechanics

Related adjective: mechanical

Related adverb: mechanically

Related noun: mechanism

Related adjective: mechanistic

Useful compounds: running mechanics, acceleration mechanics, body mechanics, movement mechanics, classical mechanics, quantum mechanics, fluid mechanics, game mechanics, writing mechanics, mechanical engineering, mechanical failure, mechanical advantage, mechanical movement, defence mechanism

Part of speech: noun / adjective / adverb

Your sentence

> “...a sprinter returning from a hamstring injury may need a progressive programme built around mobility and **acceleration mechanics**...”

Meaning in this passage

Here, **mechanics** means the **technical way the athlete's body moves and coordinates forces during acceleration**.

For a sprinter, acceleration mechanics can involve things such as:

- * body angle
- * posture
- * foot placement
- * stride pattern
- * force application

- * arm action
- * hip/knee movement
- * timing and coordination

繁體中文：

短跑運動員加速時身體各部位的動作方式、姿勢、發力方向及協調模式

Natural translation:

> 「……一名從腿後肌受傷中復出的短跑運動員，可能需要一套循序漸進、以活動能力和**加速動作機制 / 加速技術動作**為核心的訓練計劃……」

For learner purposes:

acceleration mechanics = 運動員在加速階段如何擺動身體、落腳、發力和協調各部位的技術動作模式

1. mechanics — science of forces and motion — 力學

This is the major scientific meaning.

Mechanics is the branch of physics dealing with:

- * motion
- * forces
- * energy
- * bodies at rest or in motion

Practice 1

> “Students study **mechanics** as part of physics.”

「學生在物理科中學習**力學**。」

Practice 2

> “The course introduces the basic principles of **mechanics**.”

「這個課程介紹**力學的基本原理**。」

mechanics = 研究力、運動及物體如何受力和移動的物理學分支

This is normally an **uncountable subject name**:

> Mechanics is difficult. ✓

not normally:

> Mechanics are difficult. ✗

when referring to the field of study.

2. classical mechanics — 經典力學

The branch of mechanics dealing broadly with ordinary-scale motion and forces using classical physical laws.

Practice 3

> “The motion can be explained using **classical mechanics**.”

「這種運動可以用**經典力學**解釋。」

Practice 4

> “Classical mechanics works well for many everyday physical systems.”

「**經典力學**能很好地解釋很多日常物理系統。」

classical mechanics = 以經典物理定律研究一般物體受力及運動的力學體系

3. quantum mechanics — 量子力學

A distinct major scientific field concerning matter and energy at very small scales.

Practice 5

> “Quantum **mechanics** describes behaviour at the atomic level.”

「**量子力學**描述原子尺度下的物理行為。」

Practice 6

> “The theory is based on quantum mechanics.”

「這套理論建基於**量子力學**。」

****quantum mechanics = 研究原子、次原子粒子等微觀系統行為的物理理論體系****

Useful compound, not another ordinary meaning of bare ****mechanics****.

4. fluid mechanics — 流體力學

The study of liquids and gases in motion or at rest.

Practice 7

> “Engineers use ****fluid mechanics**** to study airflow.”

「工程師運用****流體力學****研究氣流。」

Practice 8

> “Fluid mechanics is important in aircraft design.”

「****流體力學****對飛機設計非常重要。」

5. mechanics — way a body moves — 動作機制；動作技術

This is the broad sense used in your passage.

In sport, rehabilitation, physiotherapy and biomechanics, ****mechanics**** often means the technical pattern by which the body moves.

Practice 9 — Original sense

> “The programme focused on mobility and acceleration ****mechanics****.”

「訓練計劃著重活動能力和****加速動作技術 / 動作機制****。」

Practice 10

> “Poor running ****mechanics**** can increase unnecessary loading.”

「不良的跑步****動作模式 / 跑姿機制****可能增加不必要的身體負荷。」

Practice 11

> “The coach analysed her jumping mechanics.”

「教練分析了她的跳躍**動作機制 / 技術動作**。」

mechanics — movement = 身體在完成某項動作時，各部位如何排列、移動、發力和協調的方式

6. running mechanics — 跑步動作機制；跑姿技術

Practice 12

> “The physiotherapist assessed his **running mechanics**.”

「物理治療師評估了他的**跑步動作機制 / 跑姿技術**。」

Practice 13

> “Efficient running mechanics can reduce wasted movement.”

「有效率的**跑步動作模式**可以減少多餘動作。」

running mechanics = 跑步時身體姿勢、落腳、步幅、步頻、關節動作及發力協調的整體方式

7. acceleration mechanics — 加速動作機制；加速技術

Your exact expression.

Practice 14

> “The coach adjusted the athlete’s **acceleration mechanics**.”

「教練調整了運動員的**加速動作技術**。」

Practice 15

> “Good acceleration mechanics help a sprinter apply force effectively.”

「良好的**加速動作機制**有助短跑運動員有效發力。」

acceleration mechanics = 運動員在由較慢速度提升至較快速度時的姿勢、步伐、發力方向和協調模式

8. body mechanics — 身體動作力學；身體姿勢與發力方式

Very common in physiotherapy, healthcare and workplace safety.

Practice 16

> “Good **body mechanics** can reduce strain when lifting.”

「良好的**身體姿勢與發力方式**可以減少搬重物時的負荷。」

Practice 17

> “Nurses are trained in safe body mechanics.”

「護士會接受安全**身體動作技巧**訓練。」

body mechanics = 人在站立、移動、搬運或施力時，身體姿勢和動作協調的方式

9. biomechanics — 生物力學

A closely related lexical extension.

Biomechanics applies principles of mechanics to biological systems, especially human or animal movement.

Practice 18

> “Sports scientists use **biomechanics** to analyse sprinting.”

「運動科學家運用**生物力學**分析短跑動作。」

Practice 19

> “Biomechanics can help identify inefficient movement patterns.”

「**生物力學**可以幫助找出低效率的動作模式。」

biomechanics = 利用力學原理分析人體 / 生物的動作、受力及運動方式的學科

This is especially relevant to your passage.

10. mechanics — how something works internally — 運作機制；運作原理

A major figurative extension.

Here **mechanics** means the practical system of parts, steps, relationships, or rules that makes something operate.

Practice 20

> “I understand the general idea, but not the **mechanics** of the system.”

「我明白整體概念，但不清楚系統的**具體運作機制**。」

Practice 21

> “The article explains the mechanics of online advertising.”

「文章解釋了網上廣告的**實際運作方式**。」

the mechanics of something = 某件事物實際如何運作、各部分怎樣互相作用的機制

This need not involve literal machines.

11. mechanics — practical procedural details — 實際操作細節；具體程序

A common professional use.

Practice 22

> “We agree on the plan; now we need to work out the **mechanics**.”

「我們已經同意計劃，現在需要處理**具體執行細節**。」

Practice 23

> “The legal team handled the mechanics of the transfer.”

「法律團隊處理了轉移程序的**具體操作細節**。」

mechanics = 令一項計劃或安排真正執行時所涉及的具體步驟、程序和實際安排

This is figurative but very useful.

12. the mechanics of a process — 流程運作細節

Practice 24

> “She understood the strategy but not the mechanics of implementation.”

「她明白策略，但不清楚落實時的**實際操作機制**。」

Practice 25

> “Before launching the programme, we need to understand its mechanics.”

「推出計劃前，我們需要了解它的**實際運作細節**。」

This belongs to senses 10–11 rather than requiring a completely independent lexical meaning.

13. game mechanics — 遊戲機制

A very important modern gaming term.

Game mechanics are the rules and systems that determine what players can do and how the game responds.

Examples:

- * movement
- * scoring
- * combat
- * resource management
- * progression
- * turn systems
- * rewards

Practice 26

> “The game has simple but addictive **mechanics**.”

「這款遊戲的**遊戲機制**簡單但令人上癮。」

Practice 27

> “Players need time to learn the combat mechanics.”

「玩家需要時間熟悉戰鬥**機制**。」

****game mechanics = 決定玩家如何操作、互動、得分和推進遊戲的規則及系統****

This is a major contemporary meaning.

14. a mechanic — a specific game rule/system — 一項遊戲機制

In gaming, singular ****mechanic**** can mean one particular gameplay rule or interactive system.

Practice 28

> “Dodging is an important combat ****mechanic****.”

「閃避是一項重要的戰鬥****機制****。」

Practice 29

> “The game introduces a new crafting mechanic.”

「遊戲加入了一項新的製作****機制****。」

****mechanic — gaming = 遊戲中一項具體規則、互動方式或玩法系統****

This is genuinely different from:

> a mechanic = 修理技師

Same spelling, completely different concept.

15. writing mechanics — 寫作技術規範；文字形式規則

In education, ****mechanics**** can refer to formal conventions of writing, such as:

- * spelling
- * punctuation
- * capitalization
- * sentence formatting

Practice 30

> “The essay has good ideas but weak writing **mechanics**.”

「這篇文章的構思不錯，但**拼寫、標點和書寫規範**較弱。」

Practice 31

> “Teachers assess grammar, organization and mechanics.”

「教師會評估文法、組織以及**文字形式規範**。」

writing mechanics = 寫作中的拼寫、標點、大小寫及其他文字形式規則

Important distinction

writing mechanics is not exactly the same as **grammar**.

Grammar concerns sentence structure and language rules.

Mechanics concerns more formal written conventions such as punctuation and capitalization.

16. mechanic — person who repairs machines/vehicles — 機械技師；汽車維修技師

Now we move to the singular noun **mechanic**.

Practice 32

> “The **mechanic** repaired the car.”

「**汽車維修技師**修好了汽車。」

Practice 33

> “A mechanic checked the engine.”

「一名**機械技師**檢查了引擎。」

mechanic = 專門維修、保養或檢查機械、車輛或設備的人

17. mechanics — plural of mechanic — 多名機械技師 / 維修技師

This is grammatically separate from **mechanics** = 力學.

Practice 34

> “Two **mechanics** worked on the vehicle.”

「兩名**維修技師**處理那輛車。」

Practice 35

> “The mechanics replaced the damaged parts.”

「**機械技師們**更換了損壞的零件。」

This distinction is important:

> **Mechanics is a branch of physics.**

Here **mechanics** = 力學, singular in grammatical meaning.

> **The mechanics are fixing the car.**

Here **mechanics** = 多名維修技師, plural noun.

Excellent MCQ contrast.

18. mechanical — relating to machines — 機械的；機械相關的

The major adjective.

Practice 36

> “The problem was caused by a **mechanical** failure.”

「問題是由**機械故障**造成的。」

Practice 37

> “She studied mechanical engineering.”

「她修讀**機械工程**。」

mechanical = 與機械、機器、機件或物理裝置有關的

19. mechanical failure — 機械故障

Practice 38

> “The race car stopped because of a **mechanical failure**.”

「賽車因**機械故障**而停下。」

Practice 39

> “Engineers investigated the cause of the mechanical failure.”

「工程師調查**機械故障**的原因。」

20. mechanical engineering — 機械工程

A major engineering discipline.

Practice 40

> “He studied **mechanical engineering** at university.”

「他在大學修讀**機械工程**。」

Practice 41

> “Mechanical engineering covers machines, forces and energy systems.”

「**機械工程**涵蓋機器、力和能源系統等範疇。」

21. mechanical — operated by physical machinery rather than electronics/manual action — 機械式的

Practice 42

> “The watch uses a **mechanical** movement.”

「這隻手錶使用**機械機芯**。」

Practice 43

> “The door has a mechanical locking system.”

「這扇門使用**機械式鎖具系統**。」

mechanical = 主要依靠物理機件、齒輪、彈簧等機械結構運作的

22. mechanical — automatic / performed without thought — 機械式的；不假思索的

A major figurative meaning.

Practice 44

> “His movements became almost **mechanical** after hours of repetition.”

「經過數小時重複後，他的動作變得幾乎**機械式、不假思索**。」

Practice 45

> “She gave a mechanical response without really listening.”

「她沒有真正聆聽，只作出一個**機械式的回應**。」

mechanical = 像機器一樣自動、重複地進行，缺乏主動思考或自然反應的

This is very different from merely “machine-related”.

23. mechanical — lacking emotion/warmth — 生硬的；缺乏感情的

A related figurative extension.

Practice 46

> “The performance was technically accurate but rather **mechanical**.”

「表演技術上很準確，但顯得有點**生硬、缺乏感情**。」

Practice 47

> “His delivery sounded mechanical.”

「他的表達聽起來很**機械化、缺乏自然感情**。」

mechanical = 表現過於規律、僵硬或公式化，因而缺乏自然感、情緒或人味的

24. mechanically — by means of a machine — 以機械方式

Practice 48

> “The parts are **mechanically** joined.”

「這些零件以**機械方式**連接。」

Practice 49

> “The system mechanically controls the valve.”

「系統透過**機械裝置**控制閥門。」

mechanically = 透過機械裝置、物理機件或機械作用方式

25. mechanically — automatically / without thought — 機械地；不假思索地

Practice 50

> “He **mechanically** repeated the instructions.”

「他**機械式地 / 不假思索地**重複那些指示。」

Practice 51

> “She nodded mechanically.”

「她**機械地**點了點頭。」

mechanically = 像機器一樣自動、僵化或缺乏思考地

26. mechanism — physical working device/system — 機械裝置；機構

A very important related noun.

Practice 52

> “The locking **mechanism** is damaged.”

「鎖的**機械裝置 / 機構**損壞了。」

Practice 53

> “The mechanism controls the movement of the door.”

「這個**機構**控制門的移動。」

mechanism = 由多個部件組成、共同產生某種機械動作或功能的裝置

27. mechanism — process explaining how something happens — 機制；作用機制

A major scientific and figurative meaning.

Practice 54

> “Researchers are studying the biological **mechanism** behind recovery.”

「研究人員正在研究恢復背後的生物**機制**。」

Practice 55

> “The exact mechanism of the injury is unclear.”

「受傷的確切**機制 / 形成方式**仍不清楚。」

mechanism = 解釋某個現象如何產生、各因素如何互相作用的一套過程 / 作用方式

28. injury mechanism / mechanism of injury — 受傷機制

Very relevant to sport.

Practice 56

> “The medical team examined the **mechanism of injury**.”

「醫療團隊研究了**受傷機制**。」

Practice 57

> “Understanding the injury mechanism can help with prevention.”

「了解**受傷機制**有助預防傷患。」

mechanism of injury = 導致身體組織受傷的動作、力量及事件過程

29. coping mechanism — 應對機制

A psychological compound.

Practice 58

> “Exercise became an important **coping mechanism** for her.”

「運動成為她重要的**壓力應對方式 / 應對機制**。」

Practice 59

> “People develop different coping mechanisms under stress.”

「人在壓力下會形成不同的**應對機制**。」

coping mechanism = 人面對壓力、困難或情緒時，用來調整和應付的心理 / 行為方式

30. defence mechanism / defense mechanism — 防衛機制

A psychological term.

Practice 60

> “Denial can function as a **defence mechanism**.”

「否認可以成為一種心理**防衛機制**。」

Practice 61

> “The response may be an unconscious defense mechanism.”

「這種反應可能是一種無意識的**心理防衛機制**。」

defence mechanism = 人在心理上用來減輕焦慮、衝突或不舒服感受的心理反應方式

31. mechanism — formal system/method for achieving something — 機制；制度

Common in government, business and organisations.

Practice 62

> “The organisation needs a clear feedback ****mechanism****.”

「機構需要一套清晰的意見回饋****機制****。」

Practice 63

> “A monitoring mechanism was introduced.”

「當局引入了一套監察****機制****。」

****mechanism = 為達成某種目的而建立的一套正式方法、程序或制度安排****

32. market mechanism — 市場機制

Practice 64

> “Prices are influenced by the ****market mechanism****.”

「價格受到****市場機制****影響。」

Practice 65

> “The policy relies partly on market mechanisms.”

「這項政策部分依靠****市場機制****運作。」

****market mechanism = 透過供求、價格及競爭等因素調節資源和市場行為的運作方式****

33. feedback mechanism — 回饋機制

Practice 66

> “The body uses feedback mechanisms to regulate temperature.”

「人體利用****回饋機制****調節體溫。」

Practice 67

> “The programme needs a stronger feedback mechanism.”

「這項計劃需要更完善的**意見回饋機制**。」

The exact Chinese changes by domain, but the core idea is:

> **a system in which information about results affects subsequent behaviour**

34. mechanistic — viewing something as machine-like or purely causal — 機械論式的；過度機械化的

A more academic but useful family extension.

Practice 68

> “The explanation was too **mechanistic** and ignored human behaviour.”

「這個解釋過於**機械論式**，忽略了人的行為。」

Practice 69

> “A purely mechanistic view of motivation may be too simple.”

「把動機完全以**機械式因果關係**理解可能過於簡化。」

mechanistic = 把複雜事物理解為像機器一樣由固定部件和因果規律運作的；有時暗示過度簡化

Lower priority than **mechanical**, but useful in academic English.

Important distinctions

mechanics vs mechanic

This is fundamental.

mechanics

can mean:

****力學****

> “Mechanics is a branch of physics.”

or:

****運作方式 / 動作機制****

> “running mechanics”

mechanic

usually means:

****維修技師****

> “The mechanic repaired the engine.”

But in gaming:

****a mechanic****

can also mean:

****一項遊戲機制****

Context is essential.

mechanics vs mechanism

mechanics

usually emphasizes:

> how the various parts/actions work together in practice

mechanism

usually means:

> one specific system, process, or causal arrangement that produces a result

Compare:

> “the mechanics of running”

= 跑步整體動作如何運作

> “the mechanism of injury”

= 傷患如何產生的具體作用機制

mechanics vs biomechanics

mechanics

general concept of forces/motion or practical movement

biomechanics

specifically applies mechanics to biological bodies

Your phrase:

> acceleration mechanics

is sports technique/biomechanics language, but **mechanics** itself does not necessarily mean the academic field **biomechanics**.

mechanics vs technique

technique

focuses on:

> learned method or skill used to perform an action

mechanics

focuses more specifically on:

> physical movement pattern, positions, forces and coordination

In coaching:

> running technique

is broader.

> running mechanics

often sounds more biomechanical/technical.

mechanics vs movement

movement

simply describes motion

mechanics

examines:

- * how the movement occurs
- * positions
- * forces
- * timing
- * coordination

So:

****mechanics = the structure and operation behind movement****

mechanics vs physics

physics

very broad science of matter, energy, forces, etc.

mechanics

one major branch of physics focusing particularly on motion and forces.

game mechanics vs game rules

rules

tell players what is permitted or required

mechanics

include the systems through which gameplay actually operates

For example:

> “Players lose health when hit.”

can be both a rule and part of a combat mechanic.

But ****mechanics**** usually emphasizes interactive systems.

writing mechanics vs grammar

grammar

sentence structure and language relationships

mechanics

formal writing conventions such as:

- * spelling
- * punctuation
- * capitalization

They overlap in school assessment, but are not identical.

mechanical vs automatic

mechanical

can literally mean machine-operated.

automatic

means operating by itself without deliberate human control.

A mechanism can be mechanical without being automatic.

And figuratively:

> “a mechanical reply”

means rigid and unthinking,

not necessarily technologically automatic.

mechanical vs manual

In machinery:

mechanical

uses mechanical components

manual

requires direct human operation

But the contrast is not absolute because a manually operated device can still be mechanical.

mechanical vs electronic

mechanical

works primarily through physical moving components

electronic

works primarily through electronic circuits/signals

Example:

> mechanical watch

> electronic/digital watch

mechanical vs natural

In performance:

mechanical

can mean stiff, formulaic, lacking natural expression

natural

fluid, spontaneous, relaxed

> “Her first presentation sounded mechanical.”

= 太死板

> “Later she sounded more natural.”

= 更自然

Important grammar note: **mechanics** is singular or plural depending on meaning

This is especially useful.

Field/system meaning

> “Mechanics **is** an important part of physics.”

mechanics = singular field

Workers meaning

> “The mechanics **are** repairing the cars.”

mechanics = plural of mechanic

Same spelling, different grammar and meaning.

Family-extension sweep

After the full physics, sports, biomechanics, education, gaming, technology, machinery, procedural, psychological, organisational and second-pass audit, the useful modern family includes:

* **mechanics — physics** = 力學

* **classical mechanics** = 經典力學
 * **quantum mechanics** = 量子力學
 * **fluid mechanics** = 流體力學
 * **mechanics — body movement** = 動作機制 / 技術
 * **running mechanics** = 跑步動作機制
 * **acceleration mechanics** = 加速動作技術
 * **body mechanics** = 身體姿勢與發力機制
 * **biomechanics** = 生物力學
 * **mechanics — how something works** = 運作機制
 * **mechanics — procedural details** = 具體操作細節
 * **game mechanics** = 遊戲機制
 * **a mechanic — gaming** = 一項遊戲玩法機制
 * **writing mechanics** = 寫作形式規範
 * **mechanic — technician** = 機械 / 汽車維修技師
 * **mechanics — technicians** = 多名維修技師
 * **mechanical — machine-related** = 機械的
 * **mechanical — machine-operated** = 機械式的
 * **mechanical — automatic/unthinking** = 機械式、不假思索的
 * **mechanical — emotionally stiff** = 生硬、缺乏自然感情的
 * **mechanically — by machine** = 以機械方式
 * **mechanically — unthinkingly** = 機械地
 * **mechanism — physical device** = 機械裝置
 * **mechanism — causal process** = 作用機制
 * **mechanism — formal system** = 制度 / 運作機制
 * **mechanism of injury** = 受傷機制
 * **coping mechanism** = 應對機制
 * **defence mechanism** = 心理防衛機制
 * **feedback mechanism** = 回饋機制
 * **market mechanism** = 市場機制
 * **mechanistic** = 機械論式的 / 過度機械化理解的

I would stop there. Beyond this point, we start reaching narrower engineering machine-part terminology and specialist theoretical vocabulary rather than high-value general learner material.

Master comparison

Form / sense	MCQ-ready Traditional Chinese meaning
-----	-----
mechanics — physics	研究物體受力、運動及相關物理規律的力學分支
classical mechanics	用經典物理定律研究一般物體受力及運動的理論體系
quantum mechanics	研究原子及次原子尺度物理行為的量子力學理論
fluid mechanics	研究液體與氣體運動和受力的流體力學
mechanics — movement	身體完成動作時各部位的姿勢、移動、發力及協調方式
running mechanics	跑步時身體姿勢、落腳、步態和發力協調的整體方式
acceleration mechanics	加速階段中身體姿勢、步伐、發力方向及協調的技術模式

	body mechanics	身體在站立、移動或施力時所採用的姿勢和動作方式
	biomechanics	利用力學原理研究人體 / 生物受力和運動方式的學科
	mechanics — workings	某事物各部分實際如何互相作用並運作的機制
	mechanics — practical details	讓某項計劃或程序真正運行時涉及的具體步驟和安排
	game mechanics	決定玩家如何操作、互動、得分及推進遊戲的規則和系統
	a mechanic — gaming	遊戲中的一項具體玩法規則或互動系統
	writing mechanics	拼寫、標點、大小寫等正式書寫規範
	mechanic — technician	專門維修、保養或檢查機械 / 車輛的人
	mechanical — machine-related	與機器、機件或物理裝置有關的
	mechanical — automatic	像機器一樣自動、重複而缺乏主動思考的
	mechanical — performance	過於僵硬、公式化而缺乏自然感或情緒的
	mechanism — device	由多個部件組成並產生某種功能的機械裝置
	mechanism — process	解釋某種現象如何產生、各因素如何互相作用的一套過程
	mechanism — formal system	為達到某種目的而建立的一套制度、程序或運作方式
	mechanism of injury	導致身體組織受傷的力量、動作及事件過程
	coping mechanism	人面對壓力或困難時用來調整和應付的心理 / 行為方式
	defence mechanism	用來減輕焦慮或心理衝突的無意識心理反應方式
	mechanistic	把複雜現象視為固定機械式因果運作，有時過度簡化的

For your original sentence

> “...a progressive programme built around mobility and ****acceleration mechanics****...”

The exact meaning is:

****mechanics** = 人體完成一項運動動作時，各身體部位如何移動、排列、發力及互相協調的技術模式

More specifically:

****acceleration mechanics** = 短跑運動員在加速階段的身體姿勢、落腳方式、步態、發力方向及四肢協調

A natural Traditional Chinese rendering would be:

> ****「加速動作技術」****

or, if a more technical sports-science tone is wanted:

> ****「加速階段的動作力學 / 生物力學模式」****

The passage is therefore using the **sporting movement/biomechanics sense**, not **mechanics = 物理力學**, **mechanics = 維修技師們**, or **mechanics = 具體行政操作細節**.
