

Word family: **process / processes / processed / processing / processor**

Base word: process

Plural: processes

Past tense: processed

Past participle: processed

** -ing form:** processing

Related form: processor

Part of speech: noun (名詞) / verb (動詞)

Your sentence:

> "...how to respect the **process**, and how to build my life on solid ground rather than on sand."

Meaning in this passage

Here, **process** means a **series of steps or stages through which something develops or is completed**.

The speaker means that worthwhile results often require patience, correct sequencing, and gradual progress rather than rushing straight to the outcome.

繁體中文： ** 某件事情由開始到完成所經過的一連串步驟、階段或發展過程 **

中文翻譯：

> "...how to respect the **process** ..."

「如何尊重事情本身的**過程 / 步驟和發展階段**」

Here:

respect the process = 接受並重視事情需要按步驟、花時間逐步完成，而不是只追求立即結果

1. **process = series of steps/stages (過程) — 過程；程序**

This is the meaning used in your passage.

Meaning: A series of actions, changes, or stages that lead toward a particular result.

Practice 1 — Original

> "He taught me how to respect the **process**."

「他教會我如何尊重事情的**過程**。」

Practice 2

> “Learning a language is a gradual **process**.”

「學習語言是一個循序漸進的**過程**。」

Practice 3

> “The recovery **process** may take several months.”

「康復**過程**可能需要幾個月。」

****process = 某件事情由開始、發展到結果所經過的一連串步驟或階段****

Common:

- * learning process
- * recovery process
- * decision-making process
- * development process
- * creative process

These belong to one broad ****series of stages**** sense.

2. ****process = official/systematic procedure (程序) — 程序；辦理流程****

****Process**** can mean a formally organized sequence of actions used by an institution or system.

Practice 4

> “The application ****process**** takes about two weeks.”

「申請****程序 / 流程****大約需要兩星期。」

Practice 5

> “You must follow the correct ****process****.”

「你必須按照正確的****程序****辦理。」

****process = 為完成某項正式工作而按照既定次序進行的一系列程序或步驟****

This is closely related to Meaning 1.

For strict counting, I would merge it with the broad ****series of steps/stages**** concept rather than create a separate core meaning simply because the context is administrative.

The Golden Manual says not to split when only the setting or object changes but the same semantic idea still works.

3. ****process = natural series of changes (自然變化) — 過程 ; 作用****

A ****process**** can also be a sequence of natural, biological, chemical, or physical changes.

Practice 6

> “Ageing is a natural ****process****.”

「老化是一個自然****過程****。」

Practice 7

> “The chemical ****process**** produces heat.”

「這個化學****過程 / 作用****會產生熱。」

****process = 自然、身體或物質內部按一定方式發生的一連串變化****

Again, this is a domain extension of Meaning 1, not a wholly new core concept.

4. ****process = method of producing/manufacturing something (生產) — 加工流程 ; 製程****

In manufacturing and industry, ****process**** can refer to the method or series of operations used to produce something.

Practice 8

> “The factory uses a new production ****process****.”

「工廠使用新的生產****製程 / 流程****。」

Practice 9

> “The entire manufacturing ****process**** is automated.”

「整個製造**流程**都是自動化的。」

****process = 把原料或零件轉化成產品所採用的一連串操作步驟****

For core counting, I would still merge this with the broad noun sense ****series of stages/operations****.

5. ****process = deal with / handle information or material (動詞) — 處理 ; 加工****

As a verb, ****process**** means to handle something through a systematic series of operations.

Practice 10

> “The office will ****process**** your application within five working days.”

「辦公室會在五個工作天內****處理****你的申請。」

Practice 11

> “The machine ****processes**** raw material into finished products.”

「這部機器把原材料****加工處理****成成品。」

****process something = 按一套程序或操作步驟對某物進行處理，使它進入下一階段或完成轉變****

This is a major verb meaning.

6. ****process = handle data/information (電腦 / 認知) — 處理資料 ; 處理資訊****

****Process**** is very common for computers, systems, and the human mind.

Practice 12

> “The computer can ****process**** large amounts of data quickly.”

「電腦可以快速****處理****大量資料。」

Practice 13

> “I needed some time to ****process**** what she had said.”

「我需要一些時間去**消化 / 理解**她所說的話。」

****process information = 接收資訊後加以整理、分析、理解或運算****

The human-mind use is figurative but very common.

For strict counting, I would merge digital and mental processing under the broader verb sense:

> ****systematically handle information****

7. ****process = emotionally absorb an experience (心理) — 消化 ; 處理情緒****

A person can ****process**** an upsetting, surprising, or complicated experience.

Practice 14

> “She needed time to ****process**** the loss.”

「她需要時間去**消化 / 處理**失去這件事帶來的情緒。」

Practice 15

> “He was still ****processing**** what had happened.”

「他仍在**消化 / 整理**剛才發生的事情。」

****process an experience/emotion = 花時間理解、整理並逐漸接受自己的經歷或情緒****

This is an established figurative extension of information-processing.

For core counting, I would merge it with Meaning 6 rather than split mental information and emotional processing artificially.

8. ****process = alter/treat food/material industrially (食品 / 材料) — 加工****

A material or food can be ****processed**** to change its form, preserve it, or prepare it for use.

Practice 16

> “The beans are ****processed**** before being packaged.”

「豆類在包裝前會先經過**加工處理**。」

Practice 17

> “The wood is **processed** at a nearby factory.”

「木材在附近工廠進行**加工**。」

process material/food = 透過機械、化學或其他方法改變原料，使其適合使用、保存或出售

This belongs to the broad verb **systematically treat/handle** sense.

Related form: **processing**

Processing means the act or system of processing something.

Practice 18

> “Data **processing** is done automatically.”

「資料**處理**是自動完成的。」

Practice 19

> “The payment is still being **processed**.”

「付款仍在**處理中**。」

processing = 按程序對資料、申請、付款、材料等進行處理的過程

Related form: **processor**

A **processor** can mean a machine, device, company, or person that processes something.

processor = computer component (處理器)

Practice 20

> “The laptop has a faster **processor**.”

「這部手提電腦有一個更快的**處理器**。」

processor = business/machine that processes material (加工者 / 加工設備)

Practice 21

> “The company is a major food **processor**.”

「這家公司是一家大型食品**加工商**。」

processor = 負責處理資料、原料或產品的人、公司或設備

Important distinction: **process** vs **procedure**

process

emphasizes the whole development or sequence of stages.

procedure

usually means a prescribed or formal set of steps telling you how to do something.

> learning process

> safety procedure

So:

process = 過程 / 流程

procedure = 正式程序 / 操作步驟

A procedure can be part of a larger process.

Important distinction: **process** vs **progress**

These are easy to confuse.

process

= the stages/actions through which something develops

progress

= movement toward improvement or completion

> “Trust the process.”

= 信任 / 尊重事情發展的過程。

> “We are making progress.”

= 我們正在取得進展。

They are completely different concepts despite similar spelling.

Important distinction: **process vs method**

method

means a particular way of doing something.

process

means the sequence of stages involved.

> method = 方法

> process = 過程

For example:

> “Our method is simple.”

describes **how** we do it.

> “The process takes three days.”

describes the **sequence and duration**.

Important distinction: **process vs system**

system

is a set of connected parts working together.

process

is the sequence of actions or changes occurring through time.

A system may carry out a process.

Important distinction: **process vs handle**

As verbs:

handle

is broad and means deal with or manage something.

process

suggests dealing with it according to a sequence or systematic method.

> handle a complaint

= 處理投訴。

> process an application

= 按正式流程辦理申請。

So **process** is usually more procedural.

Important distinction: **processed vs processed food**

Processed simply means something has undergone some form of treatment or alteration.

Processed food specifically refers to food that has been changed from its original state through preparation, preservation, manufacturing, etc.

The exact amount and type of processing can vary greatly, so **processed** does not automatically mean one single nutritional category.

Countability note

Process is usually countable when referring to one particular sequence:

> a process

> several processes

The plural is pronounced differently from the singular in many varieties of English, but for your lexical database the important grammatical point is that it is normally countable:

> “a long process”

> “different processes”

Useful expression: ****in the process — 在過程中****

Practice 22

> “He learned a lot in the ****process****.”

「他在這個****過程中****學到了很多。」

Practice 23

> “The room was damaged in the ****process****.”

「房間在這個****過程中****受到損壞。」

****in the process = 在進行某件事情的期間 / 過程中****

Useful expression: ****the process of doing something —的過程****

Practice 24

> “The ****process of learning**** takes time.”

「****學習的過程****需要時間。」

Practice 25

> “We are in the ****process of moving****.”

「我們正處於****搬遷過程中 / 正在搬屋****。」

This belongs directly to the main noun sense.

Family-extension note

The practical modern family includes:

* **process**
* **processes**
* **processed**
* **processing**
* **processor**

Useful constructions and domains include:

* learning process
* application process
* manufacturing process
* natural process
* process an application
* process data
* process emotions
* processed food
* data processing
* computer processor

The Golden Manual says common domain uses and grammatical constructions should be covered, but the final audit should merge artificial overlaps when one underlying semantic concept explains several domains.

Master comparison

Form / sense	MCQ-ready Traditional Chinese meaning	
-----	-----	
process — series of stages	某件事情由開始到結果所經過的一連串步驟、階段或變化	
process — formal/systematic procedure	為完成某項工作而按既定次序進行的程序；屬於 stages 義	
process — natural/manufacturing development	自然變化或生產中按一定次序發生的一系列步驟；屬於 stages 義	
process — verb, handle/treat	按一套程序或操作對申請、材料等進行處理	
process — information	對資料、訊息或經歷進行整理、分析、理解或運算	
process — emotion/experience	逐漸理解、整理並消化自己的經歷或情緒；與 information-processing 義相關	
processing	按程序處理資料、材料、申請等的活動 / 過程	
processor	負責處理資料或材料的設備、公司或人；常指電腦處理器	

|

For your original sentence

> "...how to respect the **process**..."

The exact meaning is:

process = 一件事情真正做好之前需要經過的一連串步驟、時間和逐步發展

So:

> **respect the process**

= **接受並重視事情需要一步一步完成，不急著跳過步驟或只追求結果**

That connects directly to the bicycle lesson:

> check → clean → replace → repeat → learn

rather than:

> rush straight to the finished result.

For your database, I would count **3 genuinely useful core meanings** for **process**:

1. **noun — a sequence of stages, actions, or changes leading to a result**
2. **verb — systematically handle or treat something**
3. **verb — mentally process information, experiences, or emotions**

I would merge **administrative, natural, manufacturing, learning, and recovery processes** under #1, merge **process applications/materials/food** under #2, and merge **process data / process what happened / process emotions** under #3 rather than inflate the core count.
