Meaning in this passage

> If a blouse arrives with **sleeves far longer than expected**, or a pair of jeans fits differently from the chart, the customer feels punished for trusting us.

Here, **sleeves** means:

the parts of a garment that cover all or part of the arms — 衣袖；袖子

The problem is specifically:

> the **sleeve length** is much greater than the customer reasonably expected.

So:

sleeves far longer than expected = 袖子比預期長很多

****中文翻譯：****

如果一件襯衫 / 女裝上衣送到時，****袖子比預期長得多****，又或者牛仔褲的實際合身程度與尺碼表所示不同，顧客便會覺得自己只是因為信任我們而受到懲罰。

AJ. SLEEVE VS ARM

Important distinction 10: **sleeve vs arm**

arm

body part.

sleeve

clothing part covering it.

> long arms

> 手臂長

> long sleeves

> 袖子長

Your passage clearly means:

- > garment sleeves

not:

- > customer's arms.

AK. SLEEVE VS SHOULDER

shoulder

upper body area / corresponding garment area.

sleeve

extends from around the armhole/shoulder area over the arm.

A fit problem can involve:

- > shoulders fitting correctly
- > but
- > sleeves being too long.

AL. SLEEVE VS CUFF

As above:

- > sleeve = whole arm-covering portion
- > cuff = end finishing around wrist/arm.

A complaint:

- > cuff too tight

is more specific than:

- > sleeve too tight.

AM. SLEEVE VS STRAP

strap

narrow band supporting/holding garment.

sleeve

covers a much broader area of arm.

A:

> sleeveless dress with shoulder straps

has:

- * straps,

- * no sleeves.

AN. SLEEVE VS GLOVE

sleeve

extends from garment over arm.

glove

separate item covering hand/fingers.

A long sleeve may meet or overlap a glove, but they are different garment parts.

AO. SLEEVE VS COVER

cover

broadest protective covering.

sleeve

usually narrow, close-fitting, envelope/tube-like covering.

So:

> laptop sleeve

is a particular kind of:

> laptop cover/case.

AP. SLEEVE VS LINER

In engineering:

sleeve

tubular surrounding/fitted component.

liner

inner layer/surface lining something.

Sometimes a component can be called both, as with:

> cylinder sleeve / cylinder liner,

but the concepts are not universally interchangeable.

AQ. SLEEVE VS SHEATH

sheath

close protective covering, especially for:

* blade,

* cable,

* anatomical structure.

sleeve

also close-fitting, but usually tube-like and often open-ended.

They overlap technically but have different conventional collocations.

> knife sheath

> natural

> cable sleeve
> natural

AR. "SLEEVES FAR LONGER THAN EXPECTED" — PASSAGE NUANCE

The writer does **not** say:

> the blouse is the wrong labelled size.

Instead:

> the **sleeves** are far longer than expected.

This is important.

The garment might:

- * fit around the body,
- * be the labelled size the customer ordered,

yet still have poor:

> **sleeve proportion / sleeve length**

for that customer.

So the passage distinguishes:

overall size

from

individual garment dimensions.

That reinforces the earlier point:

> **same size ≠ guaranteed fit.**

Important distinction 11: **sleeve problem vs size problem**

A customer can have:

general size problem

> whole blouse too large.

or:

sleeve-specific problem

> body fits, but sleeves are too long.

Therefore:

> **sleeve length**

is one component of garment fit, not the whole concept of size.

AS. SLEEVE + PROPORTION

Connecting to your earlier **proportion** family:

Practice

> The sleeves are out of proportion to the body of the blouse.

袖子相對於衣身來說**比例失調**。

This could mean:

* visually too long,

* too wide,

* structurally mismatched.

So:

> sleeve length = absolute measurement

> sleeve proportion = relationship to rest of garment/body.

AT. SLEEVE + FABRIC

Connecting to your earlier **fabric** family:

Practice

> A stiff fabric can make a wide sleeve look more structured.

較挺身的布料會令寬袖看起來更有結構感。

The same sleeve pattern can behave differently depending on:

- * fabric weight,
- * stretch,
- * drape,
- * stiffness.

So garment fit depends on more than:

> size alone.

AU. SLEEVE + SIZE CHART

A strong online-retail distinction:

A **size chart** may give:

- * bust,
- * waist,
- * hip,

but omit:

> **sleeve length.**

If sleeve length is not listed, the customer may have no reliable way to know whether:

> sleeves will fit their arms.

That makes the original complaint especially plausible within the passage's logic.

AV. IDIOMS: LITERAL IMAGE CONNECTION

Several major **sleeve** idioms come from old literal imagery:

up one's sleeve

something hidden inside sleeve → secret plan.

heart on one's sleeve

heart symbolically displayed openly → emotions visible.

roll up one's sleeves

prepare clothes for physical work → prepare to work hard.

These should be learned as separate fixed meanings rather than translated word-for-word.

AW. COUNTABILITY

Sleeve is a normal countable noun:

> one sleeve

> two sleeves

Practice

> One sleeve is longer than the other.

一隻**袖子**比另一隻長。

For a garment:

> sleeves

normally refers to its two arm-covering parts.

For your original sentence

> If a blouse arrives with ****sleeves far longer than expected****, or a pair of jeans fits differently from the chart, the customer feels punished for trusting us.

Here:

****sleeves = 女裝上衣中覆蓋手臂的兩個衣袖，而問題是實際袖長遠超過顧客根據商品資訊合理預期的長度****

A natural Traditional Chinese rendering is:

> 如果一件女裝上衣送到時，****袖子比預期長得多****，又或者牛仔褲實際穿起來與尺碼表所示不同，顧客便會覺得自己只是因為信任我們而受到懲罰。

The cleanest learner contrast is:

- > ****sleeve** = 整隻衣袖****
- > ****cuff** = 袖子的末端 / 袖口**
- > ****armhole** = 袖窿，手臂穿過衣身的開口**
- > ****arm** = 人體手臂**
- > ****strap** = 窄帶 / 肩帶，不是袖**
- > ****sleeve length** = 袖長**
- > ****size** = 整體尺碼類別**
- > ****fit** = 實際穿在身上的合身程度**
- > ****proportion** = 袖子與衣身 / 身體其他部分的相對比例**

And the strongest passage-specific point is:

> ****the blouse can be the “correct size” but still have sleeves that are far too long.****

That is exactly why a simple size label or size chart cannot completely eliminate the uncertainty of buying clothes online.
